

Type 3522-1 and Type 3522-7 Pneumatic Control Valves Type 3522-2 Electropneumatic Control Valve Type 3522 Globe Valve

Application

Control valve for process engineering applications

| | |
|-----------------|-------------------------------|
| Valve size | NPS ½ to 2 |
| Pressure rating | Class 150 and 300 |
| Temperatures | 14 to 430 °F (-10 to +220 °C) |
| Standards | ANSI, ASME and ASTM |

Actuator options for Type 3522 Globe Valve:

- Type 3271 Pneumatic Actuator (Type 3522-1 Control Valve)
- Type 3277 Pneumatic Actuator (Type 3522-7 Control Valve) for integral positioner attachment
- Type 3372 Electropneumatic Actuator with integral positioner (Type 3522-2 Control Valve)

Valve body material

- Aluminum bronze C95200
- Cast stainless steel A351 CF8M acc. to ASTM specification

Valve plug seal

- Metal
- Soft

Other characteristics

- Female threaded ends or RF flanges
- Spring-loaded packing

These control valves feature a low profile design and interchangeability of parts that provides the flexibility to meet a wide range of applications. The modular accessory packages available can be configured to satisfy any control requirements.

Versions

Standard version with PTFE packing for temperatures from 14 to 430 °F (-10 to +220 °C) with threaded ends (Fig. 1) or flanges (Fig. 2)

- **Type 3522-1** · NPS ½ to 2 with Type 3271 Pneumatic Actuator (see Data Sheet ▶ T 8310-1)
- **Type 3522-2** · NPS ½ to 1 with Type 3372 Electropneumatic Actuator (see Data Sheet ▶ T 8313)
- **Type 3522-7** · NPS ½ to 2 with Type 3277 Pneumatic Actuator for integral positioner attachment (see Data Sheet ▶ T 8310-1)

Fig. 1: Type 3522 Control Valve with threaded ends, Type 3277 Pneumatic Actuator and Type 3725 Positioner

Fig. 2: Type 3522 Control Valve with flanges, Type 3277 Pneumatic Actuator and Type 3725 Positioner

Further options

- Adjustable graphite packing
- Stellite® trim
- Additional handwheel · see Data Sheet ▶ T 8310-1
- NACE version acc. to ISO 15156, MR0103:2007, MR0175:2002

Fail-safe action

Depending on how the springs are arranged in the pneumatic actuator (see Data Sheets ▶ T 8310-1), the valve has two different fail-safe positions effective upon air supply failure:

- **Actuator stem extends (air-to-open/fail-close):** The actuator spring closes the valve upon air supply failure.
- **Actuator stem retracts (air-to-close/fail-open):** The actuator spring opens the valve upon air supply failure.

Notes on the differential pressure tables

- The maximum permissible supply pressure is 90 psi for all valves in sizes NPS ½ to 2.
- The medium flows in the flow-to-open direction through the valve.
- Version with PTFE packing
- The leakage rates specified in Table 1 are not exceeded with the maximum differential pressures specified.
- The specified differential pressure may be restricted by the pressure-temperature diagram (see Fig. 3).
- Values specified in the gray-shaded columns correspond to the bench range.
- Differential pressures specified in the white columns apply to maximum pretensioned springs.
- Differential pressures in parentheses refer to the values in parentheses in the bench range row.
